5 Sample(s) were collected on/ between 07/15/2016 and 07/21/2016 and were received at SGS Accutest Southeast (SASE) on 07/23/2016 properly preserved, at 3.6 Deg. C and intact. These Samples received an SASE job number of FA35653. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP30665

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA35738-10DUP, FA35738-10MS, FA35738-10MSD, FA35738-10PS, FA35738-10SDL were used as the QC samples for metals.

Matrix Spike Recovery(s) for Antimony, Lead are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Antimony, Copper, Lead are outside control limits. Probable cause is due to matrix interference.

Matrix Spike /Matrix Spike Duplicate Recovery(s) for Zinc are outside control limits. Spike amount low relative to the sample amount. Refer to lab control or spike blank for recovery information.

RPD(s) for Duplicate for Lead, Antimony are outside control limits for sample MP30665-D1. High RPD due to possible sample non-homogeneity.

RPD(s) for MSD for Lead, Zinc are outside control limits for sample MP30665-S2. High RPD due to possible sample non-homogeneity.

RPD(s) for Serial Dilution for Antimony, Copper, Zinc are outside control limits for sample MP30665-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Sample(s) FA35653-1, FA35653-2, FA35653-3, FA35653-4, FA35653-5 are for Antimony, Copper, Zinc, Antimony have elevated reporting limit(s) due to matrix interference.

MP30665-S1 for Antimony: Spike recovery indicates possible matrix interference and/or sample non-homogeneity.
MP30665-S1 for Lead: Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

MP30665-PS1 for Lead: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

MP30665-D1 for Antimony: RPD acceptable due to low duplicate and sample concentrations.

MP30665-SD1 for Copper: Serial dilution indicates possible matrix interference.

MP30665-SD1 for Zinc: Serial dilution indicates possible matrix interference.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN71798

Sample(s) FA35647-22DUP were used as the QC samples for Solids, Percent.

SGS Accutest (SASE) certifies that this report meets the project requirements for analytical data produced for the samples as received at SASE and as stated on the COC. INTRODUCTION

This Data Validation Report (DVR) presents Level III data validation results for samples collected during the July through August 2016 sampling period. Data validation was performed in accordance with the Final Quality Assurance Project Plan (QAPP), Military Munitions Response Program Remedial Investigation, Closed Castner Firing Range, Fort Bliss, El Paso, Texas (February 2015), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.0 (July 2013), and the USEPA CLPNFG Inorganic Superfund Data Review (October 2004). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Metals by EPA SW 846 Method 6010C

The sample identification and methods of analyses performed on each sample is presented in Attachment 1. Overall data qualification summary is presented in Attachment 2. Level III Automated Data Review outliers are presented in Enclosure I.

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results for sample holding times, instrument performance check, initial and continuing calibrations, laboratory blanks, initial and continuing calibration blanks (ICB/CCBs), interference check (ICSA and ICSAB) samples, laboratory control sample (LCS), split duplicate samples, and internal standards.

Automated data review was performed on all QC summary results using the Automated Data Review (ADR) software program (LDC, 2013) with exception of the instrument performance check, calibrations, interference check samples, ICB/CCBs, and internal standards which were validated manually. Quality assurance (QA)/QC criteria specified in the QAPP, DoD QSM and CLPNFGs were incorporated with the program's reference library to assess compliance with project requirements.

The following are definitions of the data qualifiers:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the analyte should be considered non-detect at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NJ (Presumptive). Presumptive evidence of presence of the compound at an estimated quantity.

NA (Not applicable): Data did not warrant qualification since detected results only are affected and the compound was not detected in the associated samples.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt & Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Instrument Performance Check

Instrument performance was checked at the frequency required by the method.

All criteria for the instrument performance check were met.

III. Initial Calibration and Initial Calibration Verification

All criteria for the initial calibration and initial calibration verifications of the method were met.

IV. Continuing Calibration

All criteria for the continuing calibration verifications (CCV) of the method were met.

V. Laboratory Blanks

Laboratory blanks were performed as required by the method. No contaminant concentrations were detected in the method blanks reviewed by ADR.

No contaminant concentrations were detected in the initial or continuing calibration blanks with the following exceptions:

NQ = One or both results were < 5x the Limit of Quantitation (LOQ), therefore no data were qualified.

XIV. Internal Standards

All internal standard percent recoveries were within QC limits.

XV. Compound Quantitation

The laboratory reporting limits were evaluated. All laboratory reporting limits met the specified requirements.

All compounds reported below the limit of quantitation (LOQ) as detected by the laboratory were qualified as detected estimated (J). The details regarding the qualification of data are provided in Enclosure I.

XVI. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in these SDGs.

Due to split sample RPD, data were qualified as estimated in one sample.

Due to results being reported below the LOQ, data were qualified as estimated in three samples.

Due to calibration blank contamination, data were qualified as not detected in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Data flags are summarized and are presented as Attachment 2

Site: Castner Firing Range; Ft Bliss, TX **Report Date:** 5/1/2017 9:43:46 AM

2 Sample(s) were collected on/between 04/19/2017 and 04/20/2017 and were received at SGS Accutest Southeast (SASE) on 04/21/2017 properly preserved, at 3.8 Deg. C and intact. These Samples received an SASE job number of FA43270. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: SO **Batch ID:** MP32050

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) FA43252-5DUP, FA43252-5MS, FA43252-5MSD, FA43252-5PS, FA43252-5SDL were used as the QC samples for metals.

Matrix Spike/Matrix Spike Duplicate Recovery(s) for Antimony, Copper are outside control limits. Spike recovery indicates possible matrix interference and/or sample non-homogeneity.

RPD(s) for Duplicate for Copper, Zinc are outside control limits for sample MP32050-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for MSD for Antimony are outside control limits for sample MP32050-S2. High RPD due to possible sample non-homogeneity or incomplete digestion.

RPD(s) for Serial Dilution for Copper, Lead, Zinc are outside control limits for sample MP32050-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Sample(s) FA43270-1 for Antimony, Zinc, Copper have elevated reporting limit(s) due to matrix interference.

MP32050-PS1 for Zinc: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA43270-2 for Zinc: Sample dilution required due to difficult matrix.

FA43270-1 for Copper: Elevated reporting limit(s) due to matrix interference. Analyte detected in associated CCB.

MP32050-PS1 for Copper: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

FA43270-1 for Lead: Sample dilution required due to difficult matrix.

FA43270-2 for Antimony: Sample dilution required due to difficult matrix.

FA43270-2 for Copper: Sample dilution required due to difficult matrix.

Wet Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN74885

Sample(s) FA43261-1DUP were used as the QC samples for Solids, Percent.

SGS Accutest (SASE) certifies that this report meets the project requirements for analytical data produced for the samples as received at SASE and as stated on the COC. SASE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the SASE Quality Manual except as noted above. INTRODUCTION

This Data Validation Report (DVR) presents Level III data validation results for samples collected during the April 2017 sampling period. Data validation was performed in accordance with the Final Quality Assurance Project Plan (QAPP), Military Munitions Response Program Remedial Investigation, Closed Castner Firing Range, Fort Bliss, El Paso, Texas (February 2015), the U.S. Department of Defense (DoD) Quality Systems Manual (QSM) for Environmental Laboratories, Version 5.0 (July 2013), and a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines (CLPNFG) for Inorganic Superfund Data Review (October 2004). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Metals by Environmental Protection Agency (EPA) SW 846 Method 6010C

The sample identification and methods of analyses performed on each sample is presented in Attachment 1. Please note that sample names had to be truncated due to database limitations. Overall data qualification summary is presented in Attachment 2. Level III Automated Data Review outliers are presented in Enclosure I.

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results for sample holding times, instrument performance check, initial and continuing calibrations, laboratory blanks, initial and continuing calibration blanks (ICB/CCBs), interference check (ICSA and ICSAB) samples, matrix spike/matrix spike duplicates (MS/MSD), laboratory control sample (LCS), split duplicate samples, and internal standards.

Automated data review was performed on all QC summary results using the Automated Data Review (ADR) software program (LDC, 2013) with exception of the instrument performance check, calibrations, interference check samples, and internal standards which were validated manually. Quality assurance (QA)/QC criteria specified in the QAPP, DoD QSM and CLPNFGs were incorporated with the program's reference library to assess compliance with project requirements.

The following are definitions of the data qualifiers:

J (Estimated): The compound or analyte was analyzed for and positively identified by the laboratory; however the reported concentration is estimated due to non-conformances discovered during data validation.

U (Non-detected): The compound or analyte was analyzed for and positively identified by the laboratory; however the analyte should be considered non-detect at the reported concentration due to the presence of contaminants detected in the associated blank(s).

UJ (Non-detected estimated): The compound or analyte was reported as not detected by the laboratory; however the reported quantitation/detection limit is estimated due to non-conformances discovered during data validation.

R (Rejected): The sample results were rejected due to gross non-conformances discovered during data validation. Data qualified as rejected is not usable.

NJ (Presumptive): Presumptive evidence of presence of the compound at an estimated quantity.

NA (Not applicable): Data did not warrant qualification since detected results only are affected and the compound was not detected in the associated samples.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt & Technical Holding Times

All samples were received in good condition and cooler temperatures upon receipt met validation criteria.

All technical holding time requirements were met.

II. Instrument Performance Check

Instrument performance was checked at the frequency required by the method.

All criteria for the instrument performance check were met.

III. Initial Calibration and Initial Calibration Verification

All criteria for the initial calibration and initial calibration verifications of the method were met.

IV. Continuing Calibration

All criteria for the continuing calibration verifications of the method were met.

V. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

VI. Laboratory Blanks

Laboratory blanks were performed as required by the methods. No contaminant concentrations were detected in the laboratory blanks reviewed by the ADR software with the exception of lead. The associated sample results were not detected or were significantly greater than the concentrations found in the blanks, therefore no data were qualified. The details are presented in Enclosure I.

No contaminant concentrations were detected in the initial or continuing calibration blanks with the following exceptions:

SDG/ Method	Laboratory Blank ID	Analyte	Maximum Concentration	Associated Samples
FA43270/ 6010C	ICB/CCB	Antimony	1.4 ug/L	FTBL-SS-B44-0-12-042017-R-QA (5x)
FA43270/ 6010C	ICB/CCB	Lead	1.1 ug/L	FTBL-SS-B19-0-12-041917-R-QA (5x)
FA43270/ 6010C	ICB/CCB	Copper	2.5 ug/L	FTBL-SS-B19-0-12-041917-R-QA (20x)

Sample concentrations were compared to concentrations detected in the laboratory blanks. The

sample concentrations were not detected or were significantly greater than the concentrations found in the associated blanks.

VII. Field Blanks

No field blanks were identified in this SDG.

VIII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed.

IX. Duplicate Sample Analysis

The laboratory has indicated that there were no duplicates (DUP) analyses specified for the samples in this SDG, and therefore duplicate analyses were not performed.

X. Serial Dilution

Serial dilution was not performed for this SDG.

XI. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

XII. Field/Split Duplicates

No field duplicates were identified in this SDG.

Samples FTBL-SS-B19-0-12-041917-R-QA and FTBL-SS-B19-0-12-041917-R (from SDG HS17041053) and samples FTBL-SS-B44-0-12-042017-R-QA and FTBL-SS-B44-0-12-042017-R (from SDG HS1704053) were identified as split samples. No metals were detected in any of the split samples with the following exceptions:

XIII. Internal Standards

All internal standard areas and percent recoveries were within QC limits.

XIV. Compound Quantitation

The laboratory reporting limits were evaluated. All laboratory reporting limits met the specified requirements.

All compounds reported below the LOQ as detected by the laboratory were qualified as detected estimated (J). The details regarding the qualification of data are provided in Enclosure I.

XV. Overall Assessment of Data

The analysis was conducted within all specifications of the methods. No results were rejected in this SDG.

Due to split duplicate RPD, data were qualified as estimated in one sample.

Due to results below the LOQ, data were qualified as estimated in one sample.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Based upon the data validation all other results are considered valid and usable for all purposes.

Data flags are summarized and are presented as Attachment 2.

Thanks [redacted]

I looked at the data. Garett is confirming locations for me and he'll get back to you hopefully tomorrow on the samples we want run. I'll be on vacation until Monday.

Have a great weekend.
